

ADAMS AUSTRALIA.

LEADERS IN SAFFLOWER.

Adams Australia are proud supporters of the Safflower industry. The growing importance of safflower around the world, not least here in Australia, is a result of a number of key qualities that safflower holds as a commercial crop and the benefits of the oil produced from safflower seed to the food manufacturing industry.

Adams Australia hold the PBR on two new important varieties of safflower on licence from California, USA which is one of the worlds largest safflower producing regions.

Agronomically, safflower provides a number of benefits to farm management and return. Our new varieties are suited to lower rainfall, require lower inputs and hence lower risk for the grower. Whether you are a grower of safflower or user of safflower oil or just interested in finding out more about the benefits of safflower, please call us at Adams Australia.
